Motivation

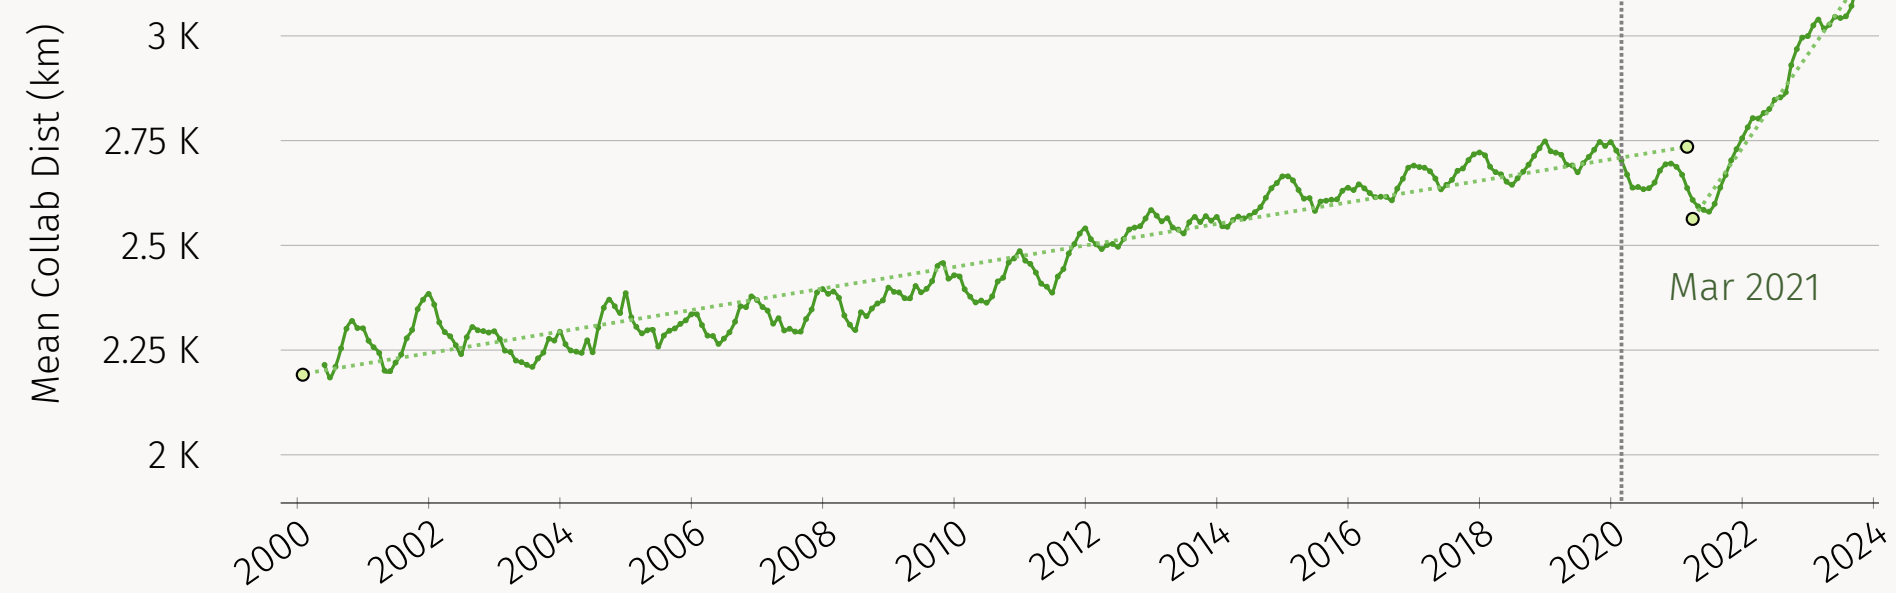

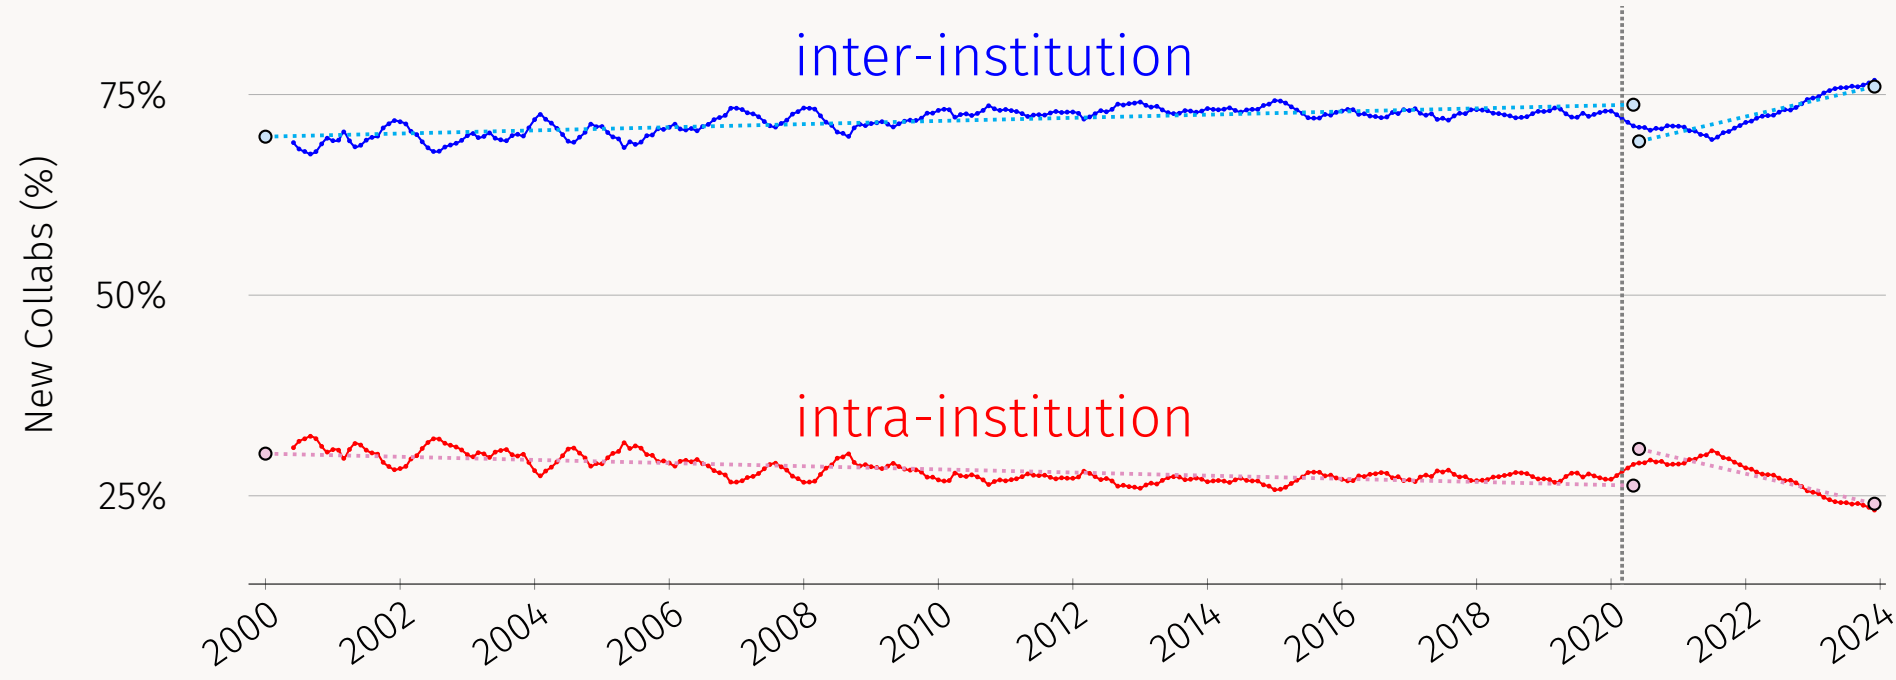

- The COVID-19 pandemic changed our daily routines limiting social interactions and enforcing lockdowns.
- Extensive research highlights the pivotal role of in-person interactions in fostering the exchange of ideas.

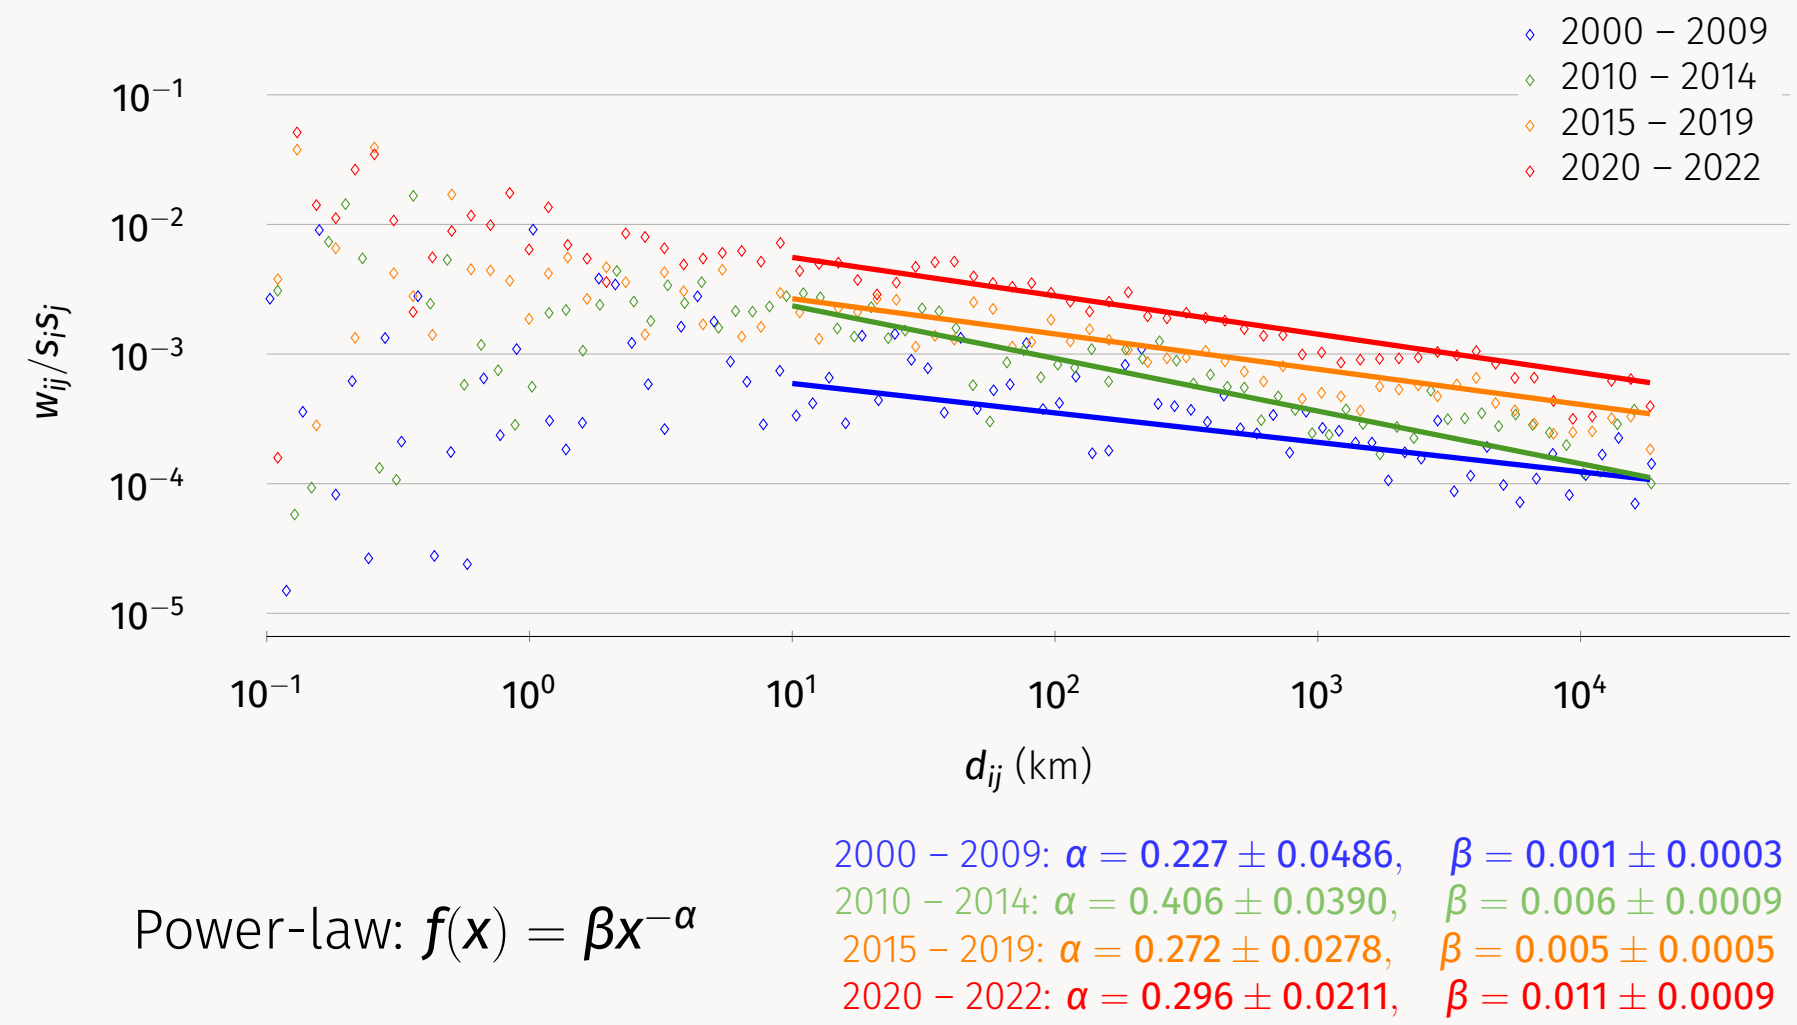

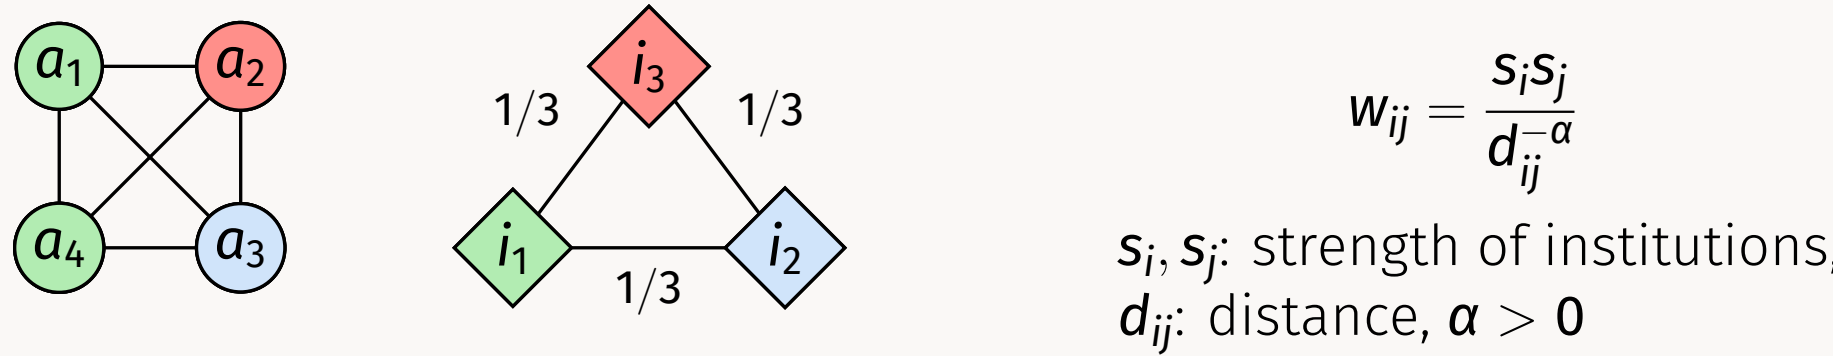

New Collaborations

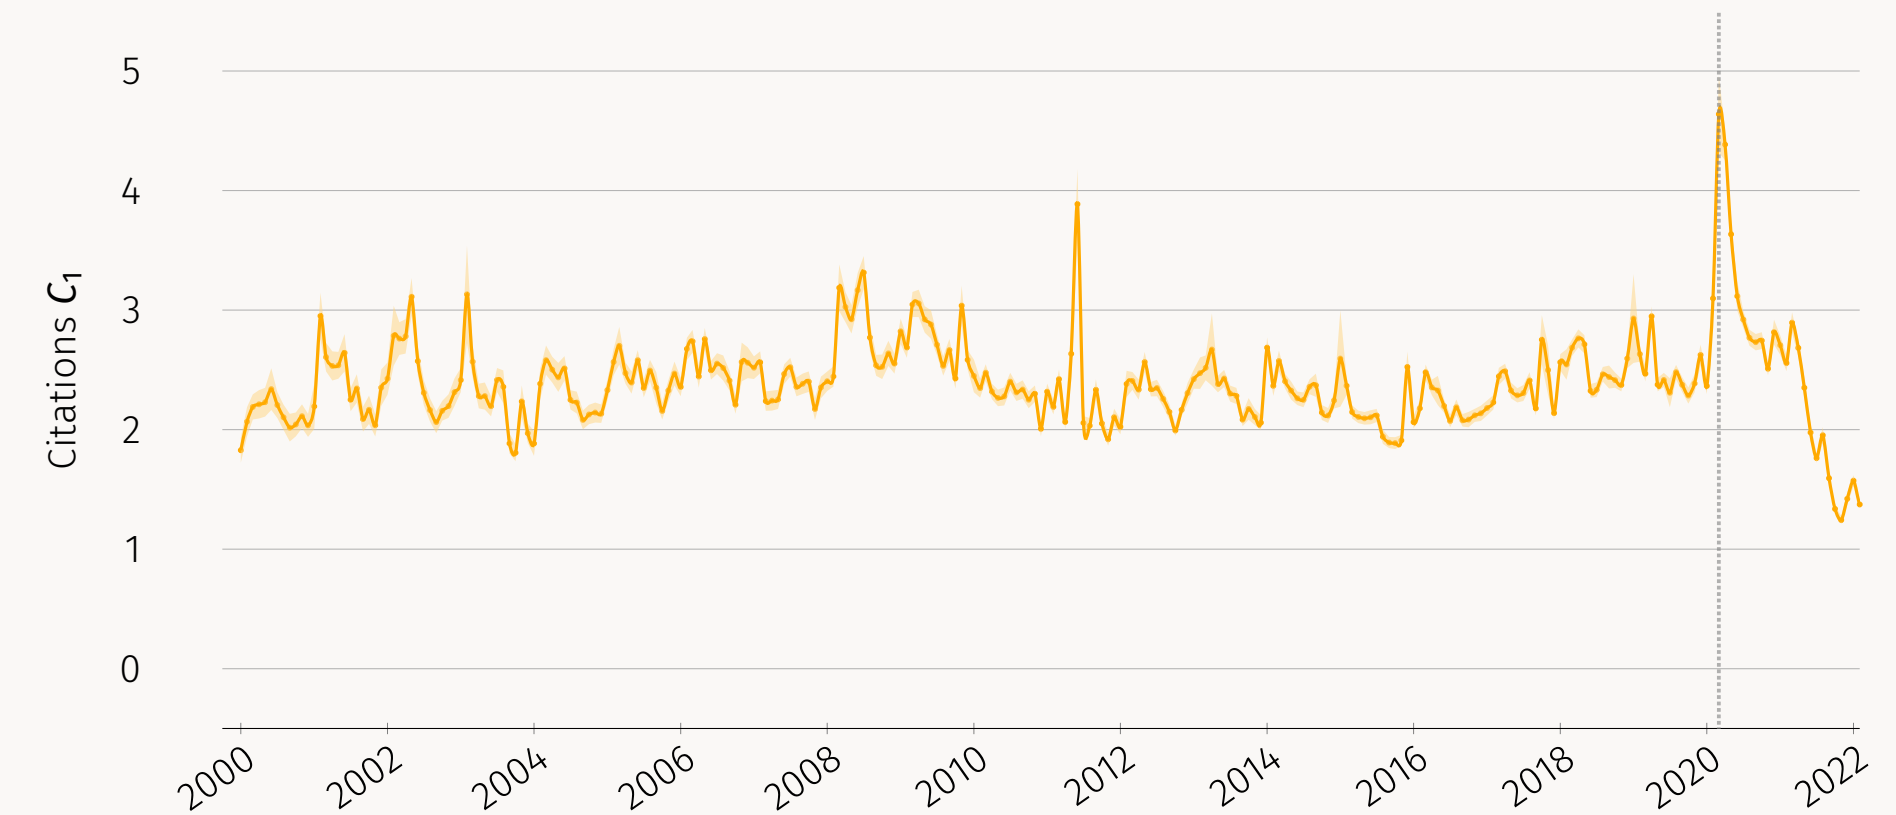

Institutional Collaborations

Gravity Law

Impact of Papers

Key Takeaways

- During the COVID-19 pandemic:
- researchers were more likely to start new collaborations;
 - researchers increased their collaborations across different institutions, independent of their distance;
 - remote collaborations and the lack of in-person events negatively affected the impact of papers.
